

TOTAL LAWN CARE

The following is Total Lawn Care's guidelines pertaining to Lawn Care Packages

LAWN CARE GUIDELINES

The standard commencement of the Fertilizing programs is mid-April, however, is subject to change due to weather. Total Lawn Care will adjust its fertilizing commencement date based on the weather conditions and subsequently alter the entire seasonal fertilizing dates in accordance with your programs specific commencement date.

Programs with 4 fertilizing applications, fertilizing will occur every 7-8 weeks (49-56 days)

Programs with 5 fertilizing applications, fertilizing will occur every 6-7 weeks (42-49 days)

Aerating commences once it is determined by Total Lawn Care's Manager the winter "frost" is out of the ground. Many companies will begin in mid to late March, however, the ground can still be frozen at certain depths, particularly in shaded areas. To maximize the benefit of aerating, Total Lawn Care wants to ensure the ground has thawed and the aerator can penetrate the ground properly. Shallow aerating serves no benefit and wastes your money

Spring Weed spraying commences in the second week of May. Fall Weed spraying commences around the second or third week of August, however, is subject to temperatures during the month. According to the manufacturer of the weed killing chemical, it is recommended NOT to spray when temperatures exceed 28°C. Spraying during high temperatures can result in harming your lawn, possibly killing the sprayed area.

Additional weed control application is performed during June or July and is subject to daily temperatures as mentioned above.

Members of the Total Lawn Care team are unable to spray for weeds within any driveway, walkways, gardens or decorative stone using the same weed spray as applied to lawns. The natural weed killing ingredient used for lawn weed control will stain any masonry, concrete, wood or stone. If you require any weed/grass control in your walkway, driveway or decorative stones, there is a separate weed and grass application available that will not stain. Please contact Total Lawn Care for a quote.

If you have any questions, feel free to talk to a member of the Total Lawn Care team anytime.
